Surrey Manlift Operator Certification

Surrey Manlift Operator Certification - Our aerial lift and scissor platform training and certification empowers participants with a knowledge and general understanding of the efficient and safe use of "Power Operated Mobile Work Platforms," under all of the current regulations in the business. Upon successful completion of training, those participating would be able to understand and recognize particular health and safety related dangers associated with making use of scissor and aerial lifts.

There are different affiliated places within your district offering Manlift Operator Certification Programs. Trainees are provided with in-depth instruction about safe use and regulations together with extensive hands-on training. The knowledge and skill level of each and every person training is assessed and individuals who are capable of demonstrating an acceptable level of operational ability will be given Operator Certification cards and employee documentation.

Theory Training
The trainer will help the trainee through a review of the theory training making use of several visual aids. The one training would work out of a workbook which covers all the necessary regulations. Other subject matters like for instance various equipment kinds including different sizes and associated applications, safe operating measures, general work place safety and pre-use inspections are individually explored.

Theory Evaluation
The evaluation of the theory parts begins with a written test, that focuses on the course concepts which was covered in the reference instruction manual. Tests are graded and returned to the one training. After that the exams are reviewed to guarantee understanding and a score of at least 70% is needed in order to pass this part of the training.

Practical Training
The practical training is covered in the hands-on portion. It is here that the trainees are shown the safe operating procedures, such as the shutdown and parking procedures and the pre-use check procedures. Each and every trainee has the chance to operate the machinery and practice the skills they learned in Theory Training under the program trainer's helpful eye in an environment which is safety controlled.

Practical Evaluation
The Practical Evaluation is where the ones training are evaluated to assure they have reached a minimum level of skill. The ones training are then evaluated on an individual basis utilizing the machinery in a reasonably difficult course environment. Once the assessment is done, the trainees are de-briefed and given the opportunity to deal with any issues they may have about any part of the program. Each employer of a successful trainee will be given the official documents and records shortly after the program has been completed.
