

Surrey Boom Lift Training

Surrey Boom Lift Training - Elevated work platforms, likewise known as aerial platforms, allow workers to perform jobs at heights that would otherwise be unreachable. There are different styles of lifts intended for various site conditions and applications. If carelessly operated, elevated work platforms could cause death or serious injury. The most common causes of related accidents are falls, electrocution, tip-overs and crushed body parts. Lift operators should be trained fully in procedures in order to prevent accidents during the operation of lifts.

The Aerial Lift Safety program provides needed resources to help those required to learn how to operate these devices more effectively. Through the course, participants will receive thorough instruction. Kinds of lift covered consist of articulating, boom supported and scissor aerial lifts. The video presents the proper procedures operators should follow. Instruction focuses on protection against falls, pre-operational inspection, stability of the device and safe driving procedures.

The program addresses equipment reliability and employee safety. All instructional materials are compliant with provincial, state and Government agency regulations and requirements. Course management and training methods would be taught. The trainer would also become well versed in the technical aspects of aerial lift safety.

Parts of the Boom Lift Training program include both classroom training and practical training. Both sessions should be successfully finished for the participant to be given a certificate of achievement.

The self-propelled boom-supported elevating work platforms are different from the self-propelled elevating work platforms in that they are able to position their work platforms totally beyond the base of the equipment. The theoretical training component is virtually the same for both types. The practical part of the training could be completed faster if just one kind of equipment is used.

Elevating Work Platform Training Program Objectives:

For safely operating Boom-Type Elevating Work Platforms and Self-Propelled Elevating Work Platforms, boom lift training will help operators use their equipment more efficiently and would decrease the chances of workplace accidents. Trainees will review of company policies and applicable rules, talk about Due Diligence, review Criminal Negligence and consequences to trainers, employers, employees and supervisors. Participants will review equipment features, stability, operating procedures, charging/fueling procedures and parking. Site-specific safety issues would be dealt with.
